(54) PIPING CLIP

(57) Abstract:

PURPOSE: To provide a piping clip in which after fixing a plurality of pipes, the other pipe can be further fixed, further decreasing a fixed space can be attained, and further position displacement of a mounting hole can be permitted.

CONSTITUTION: To one end part of a plate-shaped base unit 1 whose both end parts are bent to one surface side, one end part of a similar plate-shaped holding piece 2, formed in a scale shorter than the plate-shaped base unit 1, is turnably connected, to form a pair of stop parts 16, 10 which can be fixedly connected to each other to the other end point end part of the plate-shaped holding piece 2 and the other end side of the plate-shaped base unit. Simultaneously with the above, elastically deformable pipe holding pieces 6a, 6b are protrusively connected respectively to the other end bent part internal surface of the

plate-shaped base unit 1 and the other end bent part external surface of the plate-shaped holding piece 2, and by fixedly connecting a pair of the stop parts 16, 10 to each other, the first pipe holding part is formed between one end side of the plate-shaped base unit 1 and the plate-shaped holding piece 2, to also form the second pipe holding part between another end bent part 5 of the plate-shaped base unit 1 and another end bent part 15 of the plate-shaped holding piece 2.
